Pentest Tools

Offensive Security Services: from the pentesters at Pentest-Tools.com

Prove your security posture with human, experienced adversarial testing

Index

Get the security validation you need – without delays or surprises

Preparing for a compliance audit, about to onboard a new client, or getting ready to roll out AI-driven features?

You need to **know exactly where your security risks are** - and have **evidence** to show you've addressed them.

Our Offensive Security Services give you clarity fast: targeted testing, vulnerabilities that are actually exploitable (and relevant for *your* organization), plus remediation guidance your developers can act on without back-and-forth.

When automated tools fall short, attackers don't wait

From AI-powered workflows to short and frequent release cycles, today's attack surface changes fast. But off-the-shelf tools (automated or not) and generic assessments can't tell you if you're fixing the vulnerabilities that matter most to *your* organization.

You need context. You need relevance. And you need proof. Our Offensive Security Services are for companies that need more than a checkbox.

We deliver detailed, adversarial testing based on **real, up-to-date attacker tactics - combined with human expertise** - so you can move forward with confidence.

What makes us a trusted partner for your security program

Engagements start in days

no long sales cycles

Fast turnaround

most reports delivered within 7–10 business days

Transparent pricing

scoped by effort, not inflated by overhead

Detailed findings, no noise

all issues are manually verified

Personal hand-off for internal alignment

live debrief with your team

Free, same-scope retesting to track progress

independent proof of remediation

> **"** *Your services are a crucial element of our sustained quality investments. Your competence and responsiveness make working with you a pleasure.*

> **Etienne van der Vaeren**, CEO at TCM Belgium

What we test

Web Applications 🌐

We test apps the way attackers do — through functionality, logic, and chained abuse paths. Only proved vulnerabilities make it into your report.

APIs </>

We dive deep into your backend logic, discovering flaws in authentication, authorization, and data handling that scanners overlook.

AI-Powered Applications ✨

We identify prompt injection risks, plugin misconfigurations, and logic bugs in automated flows—before they reach production.

Internal & External Networks

We simulate intrusions, lateral movement, and privilege escalation—complete with proof of how we got in and how to close the door.

Mobile Apps 📱

From insecure storage to client-server flaws, we cover the full mobile attack surface across platforms.

Security Incident Resilience (Red Teaming) ⚠

Get the full adversary simulation: physical, social engineering, and digital intrusion paths mapped, tested, and reported with business impact.

Aidan Pawson, Managing Director at Zicket, Hong Kong

" *We were really impressed with the speed and value-for-money of the managed pentest from Pentest-Tools.com!*

We are already using Pentest-Tools.com for our automated vulnerability scans and will now be using them for our managed pentests too.

What you'll get in the report

- ✓ A clear executive summary for leadership and auditors
- ✓ Risk-level breakdowns rooted in your business context
- ✓ Step-by-step replication details for every finding
- ✓ Screenshots, payloads, and system responses as proof
- ✓ Practical recommendations written for developers
- ✓ Follow-up answers within 48 hours
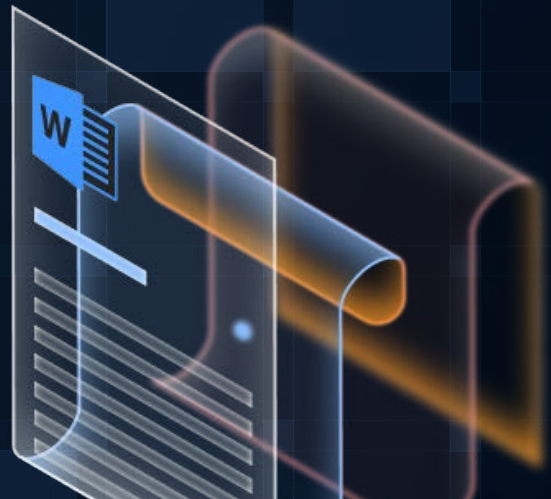

Shaun Duncan, CEO at TCM Group International, United Kingdom

" *The reports were very detailed and assisted our developers in understanding and attending to all recommendations made in them.*

A simple process with fast results

1. You request a penetration test.

2. We scope the engagement based on your environment and timeline.

3. Our offensive security experts execute the penetration test.

4. You receive the report + live walkthrough.

Start in as little as 3 business days

Get the report in 7–10 business days

Steven Brown, Director at Onit· Industry: IT and Compliance, United States

" The best thing about working with Pentest Tools is the ability to get results within seven to ten business days of requesting a pentest.

Oftentimes, sales opportunities rest on pentest results – so speed is key in these situations.
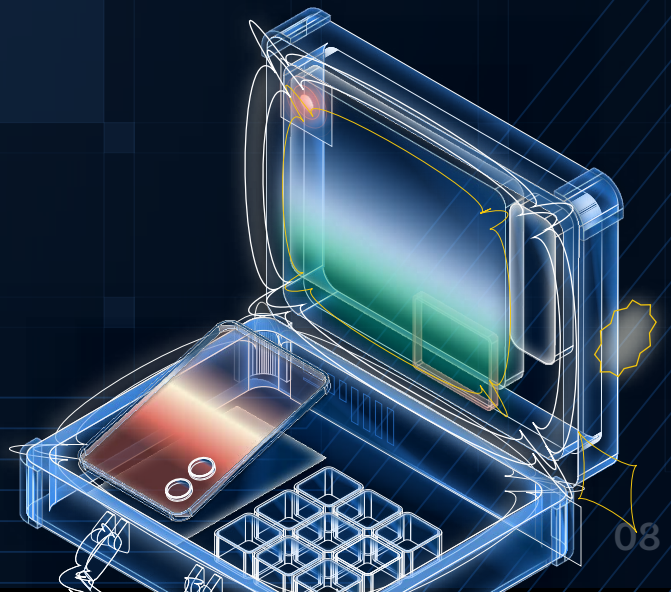

This is not your typical pentest

Watch Razvan Ionescu, our Head of Offensive Security Services, explain our approach:

Watch the video

Go beyond surface scans. Get tested like attackers think.

- ✓ **Tailored attack simulations** that match your business model and threat landscape
- ✓ **Manually validated findings** backed by exploit traces and real-world evidence
- ✓ **Actionable remediation** steps your dev team can act on
- ✓ **Fast engagement turnaround** so security doesn't delay releases
- ✓ **Flexible pricing based on real effort** - not inflated estimates

> **"** *We were so impressed with some of the findings that we even wanted to pay more than the agreed amount.*
>
> **Dan Cheia,** CEO at Oblio.eu, Romania

Meet **Razvan**, Head of Offensive Security Services

Razvan Ionescu is Head of <u>Offensive Security Services</u> at **Pentest-Tools.com** and a seasoned penetration tester with 10+ of experience in ethical hacking.

He specializes in uncovering deep, business-impacting vulnerabilities in complex web apps, APIs, and AI-powered systems.

Razvan is also GSE-certified (#298) - one of the few security professionals worldwide to earn the prestigious <u>GIAC Security Expert certification</u>, a recognition of advanced technical skill and real-world problem solving.

At Pentest-Tools.com, Razvan leads high-impact pentesting engagements across industries, turning technical findings into clear, actionable guidance that developers and security teams can use immediately.

From bypassing access controls to <u>chaining business logic flaws</u> across AI workflows, his methodical approach helps customers ship and maintain secure software at speed.
