When your tools slow you down, clients notice

Finding and validating vulnerabilities quickly, adapting to changing environments, and presenting actionable findings in a professional, client ready format is a tough job. And, as a security consultant, you're expected to operate under tight time constraints and provide value to clients from the very first engagement.

The last thing you need is old tools slowing you down:

- **Time lost to tool orchestration and manual validation:** You waste hours setting up, configuring, and switching between multiple tools before you even begin testing. This delays assessments and eats into tight project deadlines.
- **Repetitive reporting and formatting work:** Instead of actual security work, you spend excessive amounts of time reformatting findings for client-ready reports instead of conducting security work, like abusing business logic flaws that require human understanding of how the system is meant to function.
- **Managing variable scopes without wasting scan quotes:** Changing client requirements, especially mid-engagement, forces you to rerun scans or adjust workflows on the fly - risking wasted resources and impacting profitability.
- **Juggling multiple engagements and client expectations:** Working with multiple clients means you have to balance overlapping timelines and deliverables, all while providing high-quality results, fast turnaround, and clear communication.

With [Pentest-Tools.com](https://pentest-tools.com), consultants can move fast and deliver trusted results with built-in validation, flexible workflows, and reports clients can act on.

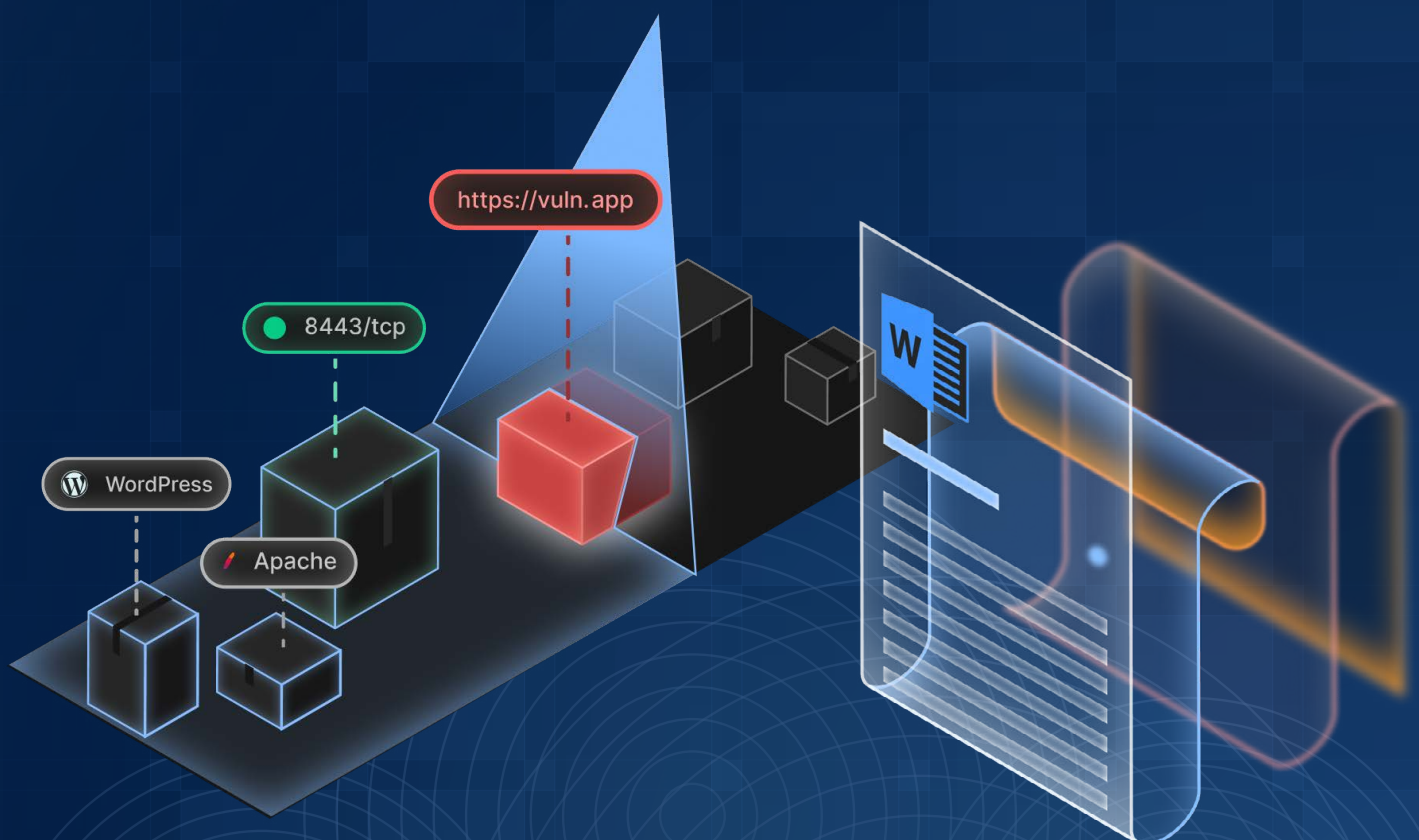

From first scan to final report, without the friction

Create proof-of-concept scenarios
- demonstrate value instantly and
win more business

Show prospects exactly why you're the right choice.

Use [Pentest-Tools.com](https://pentest-tools.com)'s proof-of-concept (PoC) capabilities to demonstrate vulnerabilities, live, during pitches and include them in deliverables. Give stakeholders evidence-based findings - payloads, screenshots, and proof - so they can see your impact firsthand move straight to remediation.

Scale engagements flexibly - avoid rigid contracts

Ditch rigid contracts - for you and your clients.

Scale assessments precisely to each engagement for maximum cost-effectiveness and profitability. With adjustable asset volumes and [pricing that aligns to your workflow](#), Pentest-Tools.com delivers the best value for your unique consulting services.

Seamless onboarding - start scanning in minutes, keep billable hours high

Spend more time delivering results, and less time setting up.

[Pentest-Tools.com](#)'s intuitive interface and [lightning fast](#) onboarding lets you launch scans in minutes - proven during [live webinars](#) - so value delivery starts immediately, without unnecessary administrative drag.

Automate repeatable test sequences - offload 80% of manual work

Free yourself from tedious testing tasks.

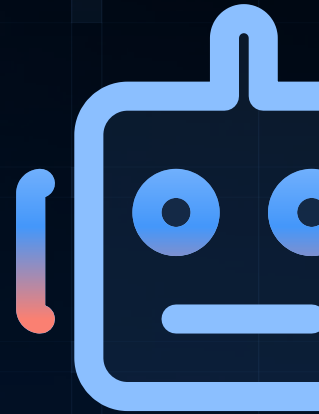

Custom-build or use [pre-built pentesting robots](#) to automate repetitive work, reduce waiting times, and maintain testing consistency across projects - all while keeping full control over your process.

Centralize client and risk management - complete coverage, zero chaos

Stay on top of every client, asset, and vulnerability from a single, unified dashboard.

Pentest-Tools.com consolidates findings from all projects, integrates seamlessly with your workflows (Markdown, PDF, or custom tooling), and uses [intelligent alerts](#) to surface only what matters.

With broad technology coverage - from networks to cloud apps - you can detect [exposures across diverse environments](#), prioritize them quickly, and deliver consistent, high-quality results without the manual overhead.

Explore how security consultants use Pentest-Tools.com

Security consultants use [Pentest-Tools.com](https://pentest-tools.com) to streamline their processes, helping them to deliver more accurate assessments and maximize value for clients - all while minimizing overhead and driving profitability.

Here's how they like to use our product:

Run authenticated and unauthenticated web app scans:

Perform thorough [web app pentesting](#) with flexible scheduling, enabling fast, recurring or ad-hoc assessments across client environments. This shortens the turnaround time from scan to report, ensuring quicker results without compromising quality. Learn more about using it in [human-led web app pentesting](#).

Validate vulnerabilities with automated exploits:

Automatically validate vulnerabilities with [built-in exploitation tools](#) to provide clear PoC. This eliminates excessive validation overhead, shows real risk to clients, and offers actionable findings you can leverage to offer targeted remediation services and create new revenue opportunities. Find out how our suite of proprietary [exploitation tools](#) prove vulnerabilities and demonstrate real-world risk.

Generate branded, editable DOCX reports:

Quickly create polished, branded, client-ready reports [that you can edit](#) to fit your preferred format. Automated reporting reduces manual formatting and scripting, allowing you to spend more time on high-value work. Find out more about what our [pentest reporting tool](#) can do for you.

Handle real-world complexity:

In a [benchmark of password auditing tools](#), Pentest-Tools.com stood out by achieving an 84% success rate in detecting valid credentials across 26 web applications, making it highly effective in [complex credential testing](#) conditions.

Why security consultants trust Pentest-Tools.com

Hundreds of security consultants use Pentest-Tools.com to deliver high-quality services through simple, easy-to-use, and well integrated tools. Designed for speed and accuracy, our product enables quick turnarounds, helping modern consultancies to respond quickly, safeguard client security, and protect their own reputations.

But don't just take it from us.

Customer spotlight: Arco IT

Since adding Pentest-Tools.com, the Swiss cybersecurity consulting company [Arco IT](#) have been able to deliver:

Faster turnaround times

on vulnerability assessments

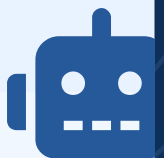

Consistent, replicable reports

that reduce client follow-up questions

Reduced manual effort

thanks to automation and clear remediation guidance

Enhanced trust from clients

impressed by the professionalism and depth of security insights

arco

What our customers are saying

Tim M

“ The Pentest-tools.com platform allows us to create multiple test vectors for our customers so they can get an external and internal perspective of their vulnerabilities especially for web applications.

**Joshua Brown, IT
Consultant**

“ I like Pentest-Tools.com because the platform allows me to confirm open ports - if any - in a quarterly review for my client services. Providing reports of checks, scans, etc. is crucial in my industry and with these tools, it is fast and easy.

**Cybersecurity
Manager, IT
Services**

“ It is a great tool for performing vulnerability scans, it offers a variety of detection and exploitation scanners, it has customizable reports and it is very easy to use. It is the best cost-benefit option.

**Matt Middleton,
Security Consultant
& Director at
Millbridge Systems**

“ The reports I export flow so well! I spend 75% less time than I needed before for this task. Pentest-Tools.com is producing good quality reports, so I dropped a dedicated product for which I used to pay extra.

Accelerate your consultancy with workflows that save time and boost profit

Discover how our [flexible pricing](#) adapts to your exact engagement needs, so you can maximize profitability without being locked into rigid contracts.

Learn how to create branded, [client-ready reports](#) in minutes, cutting your formatting time while impressing stakeholders with clear, actionable insights.

Discover what's possible. Prove what's **real**.
With proprietary tech and key **offensive security** experts.
